

01. Demand-side opportunity and observed outcome

Opportunity does not guarantee coverage

Pure translation mechanism: TLB result vs IPC

02. Cross-page translation evidence funnel

03. Does vBerti generate the right cross-page translations?

04. Is PQ dropping the main bottleneck?

05. Downstream timeliness and pollution checks

07. GAP + XSBench: demand need vs useful cross-page coverage

08. Direct test of the high-need / low-coverage hypothesis

PQ drop rates: workload, benchmark, and amean_all (trace-equal)

PQ drop rates: benchmark and amean_all (trace-equal)

11. vBerti cross-page prefetch accuracy at STLB

12. vBerti cross-page prefetch coverage at STLB

13. vBerti cross-page prefetch too-early at STLB

14. vBerti cross-page prefetch too-late at STLB

15. vBerti cross-page prefetch pollution candidates at STLB

16. vBerti end-to-end data-prefetch accuracy

17. vBerti cross-page prefetch too-late at DTLB
